

EHW

EUROPEAN HYPERLOOP WEEK

ENCOURAGE COLLABORATION

For years now, student-run teams have been building Hyperloop prototypes and driving innovation forward. Although there is a competitive element, our aim is to bring these teams together where they can learn from each other and improve, elevating Hyperloop prototyping in the process. Our aim is to encourage discussions and stronger collaboration between students, industry leaders, legislators and other stakeholders

FAMILIARISE THE PUBLIC

The event will bring together industry professionals, students, and interested members of the public with a common goal: Hyperloop development. All these different perspectives will start conversations and bring up interesting points that can improve our understanding of the technology and aid progress in the field. Our goal is to familiarize the general public with the hyperloop concept and its feasibility

CHALLENGE THE BEST STUDENT TEAMS

The students of today are the industry leaders of tomorrow, and what could be better than getting them to think big! There is more to Hyperloop student engagement than max speed competitions, and so many interesting questions to answer and problems to tackle. We have to move forward and we believe in the ability of students to help get us there. We want to challenge the best university teams in the world to innovate and contribute to the handling of current challenges in hyperloop development.
